Goldberg Barn Track

Sliding Track & Hardware

Goldberg is pleased to offer its new exposed roller style, sliding barn door track and hardware sets. Flat track style with ball bearing rollers and mounting bolts...powder coated black or silver. 400lb capacity per door.

Easy to Install

1. Hang Track on Wall

The best way to support a sliding barn door is with a continuous backer block in the wall. However, if that is not an option, you can mount a header board to the wall then attach the track to the header board. This also works nicely if casing, chair rail, or base board projects from the wall. Wall extensions are also available for this.

Just three sliding doors on a job saves you up to 50 square feet and eliminates the maintenance issues of a pocket door.

3. Hang Door on Track

2. Mount Hangers to Door

Goldberg Barn Track comes with ball bearing rollers, pre-drilled track, all mounting bolts, stops, anti-jump blocks, and floor guide. Double doors are as simple as butting two tracks together.
