

GOLDBERG BROTHERS

SOFT STOP

Introducing Soft Stop, a new soft close system from Goldberg Brothers

Soft Stop allows barn doors to gently slow down and stop while opening and closing. The kits are sold in pairs for smooth stopping on both ends of the track. Soft Stop is designed to easily install on existing or new Goldberg track systems.

- Retrofits to your existing Goldberg Brothers barn track systems
- Fits our Standard Series, Stainless Series and MP Series
- Installs in less than 10 minutes without removing the hardware already on your barn door – simply attach using the existing lag bolts
- Mechanism is completely hidden, so it will not affect the design aesthetics of your barn track hardware
- Made from durable custom manufactured steel – not plastic like other systems
