The two matching doors should be at least as tall as the height of the finished opening.
The combined width of the two doors should be at least 1ʺ greater than the width of the finished opening to allow an overlap of at least ½ʺ on each side when both doors are closed.
The net* length of each track should be double the width of one door minus ½ʺ or 1ʺ in order to keep the bottom edge of each door engaged with its door guide on the floor. If necessary, you can place a special order for tracks longer than you need and have them custom-cut at our factory.

Use the table below to match the recommended door panel width with the corresponding maximum opening width and track length. The column on the right indicates the minimum hardware required, including the catalog number of the corresponding track in our Standard Series product line.

Any track more than 8ʹ long can be substituted with two or more shorter tracks, plus a wall mounting kit and a track connecting plate for each additional track. This substitution may reduce the overall expense, due to the potentially high cost of shipping long parcels.

• any two matching Standard Series hardware sets  
• one track 6001T160 with biparting custom cut to 135” |

*For correct fit and performance, we make our Standard Series tracks ½ʺ shorter than their nominal length. For example, a 6001T4 track has a nominal length of 4ʹ, but a net length of 3’11½ʺ. This helps keep the door properly positioned above the door guide when using the most common door sizes. Our special biparting tracks 6001T6P and 6001T8P are 1” shorter than their nominal lengths.

†Some custom installations may require additional or different items not listed. Optional accessories such as door pulls and Soft Stop are sold separately.
