**Note:** Use the provided installation layouts and table to establish what combination of spacers will be used to install the track on the wall.

### Door Prep and Hanger Installation

Place the top mount 1/2" from both sides of the top half of the door. The centerline should be 2 1/2".

Using the top mount screws, attach the top mount hangers to the door as shown in the diagram.

**Note:** Due to varying door thicknesses, make sure the back edge of the hanger aligns with the back edge of the door.

### T-guide Installation

Using the T-guide screws, attach the T-guide to the floor by aligning the edge of the guide with the edge of the finished opening as shown above.

Plumb the door before fastening the door guide to the floor.

Goldberg Brothers barn door track and hardware sets come with a one-year manufacturer's warranty for defective parts under normal installation and use. Warranty is subject to repair or replacement of defective components at manufacturer's discretion and does not include installation costs.

Goldberg Brothers does not warrant the loss of finish at points where roller is in contact with track. Goldberg Barn Track is sold as a rustic finished hardware and Goldberg does not warrant the imperfections seen through the finish in steel parts. It is part of the look.

With the exception of our stainless steel products, Goldberg Brothers does not warrant any products installed and used outdoors or where they are exposed to weather, running water or water condensation. Under these conditions, rust and other damage will naturally occur.

This warranty does not include loss or defeat caused by elements outside the control of Goldberg Brothers, Inc., such as natural disasters, weather, fire, water leakage, abuse, improper installation, or anything else deemed out of the control of Goldberg Brothers, Inc.
Track Installation

Mark the centerline* of the track on the wall using a level.

*The centerline of the Track is represented as the door height (DH) + 1 1/2” above finished floor.

At each of the track connecting points, drill 1/16” pilot holes.

Using a hex lag bolt, track stop, spacer and washer, connect one end of the track to the wall using the pre-drilled hole closest to the opening as shown in the diagram.

Using the remaining hex lag bolts, spacers and washers, finish attaching the track at the remaining connecting points.

Lift the door and hang it from the track.

Swing the track to the opposite end of the wall as shown.

Using the same method as before, connect the opposite end of the track to the wall.
